PROFESSIONAL SUMMARY

Mechatronics Engineer and Software Engineer with 6+ years of experience delivering end-to-end software solutions across web, backend, and AI-powered applications. Strong background in system architecture, API integrations, cloud technologies, and business process automation. Experienced in implementing conversational AI, LLM integrations, and data-driven solutions to optimize customer operations and internal workflows. Passionate about translating business challenges into scalable technical solutions while working closely with stakeholders and cross-functional teams.

EDUCATION

Universidad Militar Nueva Granada

Mechatronics Engineering

Jan. 2019 – Apr. 2025

Cymetria

Cloud computing

Sep. 2024 – Dec. 2024

Oracle Next Education

Beginner Programming Training / Front End Training / React Training

May. 2023 – Dec. 2023

Universidad de Antioquia

Programming skills training program with emphasis on mobile application development.

May. 2021 – Dec. 2021

EXPERIENCE

Fullstack developer

Mar. 2025 – Apr. 2026

Weibook

- Led the implementation of AI-powered features using Large Language Models (LLMs), primarily Anthropic Claude, to deliver customer intelligence, business analytics, workflow automation, and conversational experiences within the company's ERP platform.
- Designed and developed a conversational WhatsApp AI assistant using Claude to automate appointment scheduling, rescheduling, and cancellations through natural language interactions.
- Built an AI-powered technical support assistant using Retrieval-Augmented Generation (RAG), enabling contextual support based on the platform's documentation directly within the ERP.
- Designed and integrated intelligent voice agents using Twilio and VAPI to automate demo scheduling, customer onboarding, product assistance, and post-implementation follow-ups.
- Designed AI-powered reporting solutions that transformed financial and operational ERP data into executive summaries, sales insights, inventory analysis, and business performance reports for decision-making.
- Developed and maintained scalable ERP web applications using React.js, Next.js, Angular, and Node.js, supporting over 1M+ users interacting with booking links and 2K+ active businesses.
- Designed and integrated 20+ RESTful APIs for reservations, customers, inventory, collaborators, payments, POS, and other core ERP modules.
- Implemented complex scheduling workflows managing over 500K monthly reservations and processed more than 400K monthly POS transactions with real-time financial calculations.
- Optimized application performance by improving MySQL and MongoDB queries and implemented monitoring with Grafana and New Relic, reducing response times by 20–30% and improving system visibility.
- Collaborated with cross-functional teams to design and implement scalable ERP and AI-driven solutions based on business and customer requirements.

Front End web developer

Sep. 2023 – Jan. 2025

Standard Salud

- Developed and maintained enterprise ERP software for healthcare organizations, supporting modules for patient management, appointments, inventory, billing, and operational workflows.
- Designed and implemented new features using React.js, improving usability and streamlining daily operations for healthcare providers.
- Integrated RESTful APIs to connect frontend applications with core ERP services, ensuring reliable communication across business modules.
- Implemented AI-powered inventory alerts that automatically classified medication expiration risk based on healthcare inventory regulations, improving inventory monitoring and reducing manual oversight.
- Built and maintained reusable React components, accelerating feature development and improving consistency across the platform.
- Collaborated with cross-functional teams using Agile methodologies to deliver scalable ERP solutions focused on healthcare operations.

Engineering Intern

Dec. 2023 – Dec. 2024

Slb

- Developed Power BI dashboards and data visualizations to support operational decision-making and improve visibility into business performance.
- Analyzed operational data and collaborated with engineering teams to identify process improvement opportunities and support data-driven decisions.
- Participated in quality control and operational workflows, ensuring compliance with engineering standards and contributing to process optimization.
- Collaborated with cross-functional teams to support engineering operations, documentation, and continuous improvement initiatives.

Software Developer & Systems Administrator

Jun. 2020 – Jan. 2026

Fundación Artística y Cultural Talentos

- Developed and maintained custom software solutions that streamlined the organization's daily operations, improving information management and administrative processes.
- Designed and implemented workflow automations that reduced manual tasks and increased operational efficiency across multiple business processes.
- Built internal management, reporting, and data processing tools to support operational and strategic decision-making.
- Managed system administration, deployments, infrastructure, and ongoing software maintenance, ensuring reliability and continuous availability of business applications.

TECHNICAL SKILLS

Artificial Intelligence: Anthropic Claude, OpenAI GPT, Google Gemini, Prompt Engineering, AI Agents, Conversational AI, Retrieval-Augmented Generation (RAG), LLM Integration, AI Workflow Design

Automation & Integration: REST APIs, Workflow Automation, API Integrations, Webhooks, Twilio, VAPI

Enterprise Systems: ERP Systems, Inventory Management, POS, Customer Management, Appointment Scheduling, Billing, Business Intelligence

Languages: JavaScript, TypeScript, Python, SQL, PHP, Java, Go, C/C++, Kotlin, .NET

Frameworks: React.js, Next.js, Angular, Node.js, Vue.js, Django, Electron

Databases: MySQL, MongoDB, PostgreSQL

Cloud & DevOps: AWS, DigitalOcean, Git, GitHub, Grafana, New Relic, Postman

Tools: Power BI, Power Apps, VS Code, Visual Studio, PyCharm, Android Studio
